

Turn new AI capability into work that sticks.

Candidate thesis for the ChatGPT Power User Enablement Analyst role by Russell Dudek.

ACTUAL WORK

Convert fragmented ChatGPT experimentation and rapid product change into a governed portfolio of repeatable workflows that employees adopt and leaders can measure.

Company moment

VOLTO publicly positions itself at the intersection of technology, talent, strategy, corporate training, AI and automation, and advisory-to-delivery outcomes.

Candidate thesis

Do not optimize for message volume. Optimize the conversion rate from capability to governed work: fit, safe use, repeatability, adoption, and measurable outcome.

Operating tensions

Feature velocity vs. stable practice; experimentation vs. data boundaries; usage volume vs. business value; shared standards vs. functional fit; demos vs. durable behavior.

Capability Transformer

Inputs: new capabilities, workflow friction, data boundaries. Conversion: fit, safety, human authority, repeatability. Outputs: adopted workflow, measured value, learning return.

SUCCESS SCORECARD

DIMENSION	MEASURES TO ESTABLISH	DECISION ENABLED
Adoption	Activation, weekly active use, repeat use, tool diversity, power-user cohort	Where coaching or access is needed
Workflow	Cycle time, completeness, rework, handoff quality, labor hours avoided	Which use cases earn scale
Trust	Human checkpoints, source use, policy exceptions, GPT ownership and review	What must be bounded or stopped
Enablement	Demo-to-practice conversion, playbook reuse, champion coverage	Which enablement motion works
Learning	Time from feature release to validated workflow	How fast VOLTO can absorb change

STAKEHOLDER SYSTEM

Outcome owners

Executive sponsor, functional leaders, finance, and delivery owners define the work and value.

Trust owners

Workspace admins, security, privacy, legal, data, and app owners define access and controls.

Adoption owners

Power users, champions, managers, and frontline users test, teach, reinforce, and improve.

Turn new AI capability into work that sticks.

Russell Dudek · VOLTO Consulting

EVIDENCE MAP

ROLE OBLIGATION	VERIFIED EVIDENCE	HOW IT TRANSFERS
Workflow optimization and automation	DudeWorth agentic workflow patterns; Vape-Jet AI-assisted cross-functional workflows	Hands-on conversion of work signals, context, judgment, escalation, and governance into repeatable mechanisms
Demo and enablement	Standard work, training, technical talks, IEEE programming, cross-functional routines	Translate techniques for different audiences and attach learning to work
Usage analysis and adoption	Dashboards, performance measures, throughput visibility, readiness frameworks	Separate activity from outcome and instrument adoption
Prompt engineering and governance	Structured context, retrieval, HITL, decision records, evaluation, governance rails	Build tested patterns without overstating formal workspace-administration tenure
Cross-functional playbooks	Production, quality, engineering, support, customer success, ERP, CRM, logistics	Create function-specific playbooks while preserving one governance spine

DECISION ARCHITECTURE

Prioritize Which workflow has enough value, readiness, ownership, and adoption capacity to test now?	Bound What data, source, action, and human-authority rules must remain explicit?
Prove What quality, workflow, adoption, economics, and trust measures determine success?	Decide Standardize, scale, repair, hold, or retire - with an owner and review date.

EXECUTIVE INTERVIEW QUESTIONS

- What would make this role unquestionably successful six months from now?
- Is the primary customer VOLTO’s workforce, a client workspace, or both?
- Which functions already contain credible power users, and where is adoption still experimental?
- Who owns workspace administration, security, privacy, legal interpretation, and GPT/app approval?
- Which recurring workflows create the most visible friction, and how does VOLTO distinguish popular use from valuable use?
- What usage, task, impact, and business-system data can this role access?
- Who decides whether a new ChatGPT feature is enabled, piloted, constrained, or deferred?
- What compensation range was intended by the posting’s “\$60/yr-\$65/yr” display?

BOUNDED WORKING-SESSION OFFER

Provide one representative workflow, sample sources, the data boundary, and the human decision that cannot be delegated. In 45 minutes Russell can map the context contract, draft the prompt/workflow pattern, define evaluation criteria, identify the governance rail, and propose the adoption measure.
