

The Capability Transformer

Four practical sheets for moving a ChatGPT use case from interesting to adopted, governed, and measurable.

SHEET 1 · WORKFLOW INTAKE CARD

FIELD	PROMPT
Work to improve	What recurring task, decision, handoff, or knowledge burden creates friction?
Current consequence	Where do delay, rework, inconsistency, missed context, or avoidable effort appear?
Required inputs	Which sources, examples, tools, files, and context are needed?
Human authority	What judgment, approval, commitment, or escalation remains human?
Data boundary	What information is permitted, restricted, or prohibited?
Success measure	How will quality, time, rework, completeness, adoption, or economics change?
Owner	Who owns the workflow, the AI asset, the data, and the outcome?

SHEET 2 · PROMPT/WORKFLOW ASSURANCE CHECKLIST

Purpose

Purpose and user are explicit; required context and approved sources are named.

Output

Output format is testable; examples cover normal and edge cases.

Control

Uncertainty behavior, human checkpoint, restricted data, and escalation are defined.

Lifecycle

Evaluation set, owner, review date, and retirement criteria exist.

WORKED EXAMPLE · EXPERT HANDOFF TO STANDARD WORK

Input

Approved notes, process owner, examples, known exceptions.

AI role

Structure first draft, compare examples, surface missing context.

Human authority

Owner approves steps, exceptions, and escalation.

Evidence

Cycle time, completeness, reuse, revision load.

The Capability Transformer

Russell Dudek · VOLTO Consulting

SHEET 3 · DEMO-TO-ADOPTION DESIGN

ELEMENT	DESIGN RULE
One work moment	Demonstrate one consequential task, not a feature tour.
Before / after	Show the old work, changed mechanism, and retained human decision.
Practice	Participants use their own bounded example before leaving.
Job aid	Provide the prompt/workflow, source rule, checklist, and escalation path.
Reinforcement	Schedule office hours, champion follow-up, and a review point.
Measure	Track repeat use and the work outcome - not attendance alone.

SHEET 4 · ADOPTION AND VALUE SCORECARD

SIGNAL	QUESTION	EVIDENCE
Activation	Did the intended people gain access and begin?	Enabled seats, activated users
Depth	Are people using more than basic chat?	Tools, GPTs, Projects, apps, repeat patterns
Workflow change	Did the task or handoff actually change?	Observed standard work and process evidence
Quality	Is the output more complete, consistent, or useful?	Evaluation sets, review results, rework
Economics	What time, delay, or avoidable effort changed?	Cycle time, labor hours avoided, throughput
Trust	Are data, authority, and exceptions handled correctly?	Policy exceptions, escalation, review outcomes
Sustainability	Will the pattern survive feature and personnel change?	Owner, review date, adoption recurrence

MONTHLY CAPABILITY REVIEW

Release signal What new capability materially changes an active workflow?	Portfolio effect Which pilot, playbook, governance rule, or training asset must change?	Decision Test, adopt, constrain, defer, replace, or retire - with an owner and date.
